FEDERAL COMMUNICATIONS COMMISSION
OFFICE OF THE SECRETARY

To: The Commission

**COMMENTS OF THE
ASSOCIATION OF AMERICA'S PUBLIC TELEVISION STATIONS**

The Association of America's Public Television Stations ("APTS") submits these Comments in response to the above-captioned Petition for Rule Making ("Petition"). In that Petition, the Community Broadcasters Association ("CBA") requests that the Commission establish a new Class A television service which would permit low power television ("LPTV") stations providing certain minimum amounts of local programming to become primary broadcast stations entitled to protection against interference by full power television stations and by translators and other secondary services. While APTS is sympathetic to the CBA's desire to protect the service provided by LPTV stations, it urges the Commission to deny the Petition at this time. CBA's proposal will adversely affect the ability of many public television stations to continue serving their audiences by restricting the ability of these stations to improve their facilities during and after the DTV transition. Further, CBA's proposal will reduce public television stations' ability to find

replacement channels for translators displaced by DTV assignments and by new services authorized on channels 60 to 69.

Introduction

APTS is a nonprofit membership association whose members comprise most of the nation's 353 public television stations. Among other things, APTS represents its membership on a national level by presenting the stations' views to the Commission, Congress, the Executive Branch and to other federal agencies and policy makers. It is submitting these comments on behalf of its members.

In its Petition, the CBA requests the Commission to create a new Class A television service that would be licensed, along with full-power television stations, under Part 73 of the Commission's rules and would enjoy primary status. Under the CBA proposal, a low power television station that meets certain local origination criteria would be permitted to upgrade its license from its current status as a secondary authorization to a primary status. Class A stations would be protected against interference from other LPTV stations, television translator stations and full power stations seeking to modify their facilities.¹ In addition, the CBA proposal would allow Class A stations to increase their permissible power levels by over 300%,² would allow Class A stations to upgrade to full power digital facilities without facing competing applications,³ and would give Class A stations preference over television translators and low power stations when those

¹ See proposed Section 73.627(g).

² Compare Section 74.735 with proposed Section 73.627(e)(i). Currently, low power television and translator stations are limited to ERPs of between 3 kw and 150 kw depending on the channel used. The CBA proposal would allow Class A stations to operate with an ERP of between 10 kw and 500 kw, again depending on the channel.

³ See proposed Section 73.627(e)(i) & proposed Section 73.622(i)

stations are displaced from existing channel assignments to accommodate a full power station launching digital facilities.⁴

This proposal would effectively reverse the Commission's decision to maintain the secondary status of LPTV and translator stations during the transition to digital.⁵ It would also fundamentally change the manner in which the Commission allocates television channels, from the mileage separation allotment system employed for NTSC authorizations and for new DTV channels, to an interference-based system similar to that employed in the AM band. The effect of that shift in the allotment system could have a significant adverse affect on television service in general.⁶

APTS is specifically concerned, however, about the effect of the CBA proposal on the nation's public television system and on the ability of public television stations to improve their facilities and to continue serving rural, remote communities through their translator systems. Although APTS believes the CBA petition has some merit, the petition is premature. The Commission should wait until the impact of its new DTV rules are fully understood before creating a new class of protected stations. Low power applicants obtained their channels and launched their service knowing that they were providing a secondary service. They should not be allowed to upgrade their status now at the price of jeopardizing public television service to a significant portion of the country.

⁴ See proposed Section 73.627(g).

⁵ *Advanced Television Sys. and Their Impact upon the Existing Television Broad. Ser., Sixth Report and Order in MM Docket No. 87-268*, 12 FCC Rcd. 14588, ¶¶ 141-43 (1997) ("Sixth Report and Order"), *aff'd on recons.*, ___ FCC Rcd ___, ¶¶ 105-07 (1998). Further, the Commission's decision not to change the secondary status of LPTV and television translator stations was affirmed by the Court of Appeals. See *Polar Broad. v. FCC*, 22 F.3d 1184 (D.C. Cir. 1994).

⁶ See *Policies to Encourage Interference Reductions Between AM Broad. Stations*, MM Docket No. 89-46, 4 FCC Rcd. 2430 (1989).

A. The CBA's Proposal To Require Modifications By Full Power Stations To Protect Class A Stations Could Adversely Affect Many Public Television Stations

As the Commission is aware, many public television stations operate with limited facilities, largely as a result of limited financial resources when the stations were built. APTS is concerned that CBA's proposal to give Class A stations protection against interference caused by modifications in the facilities of full-power television stations could preclude many of those public television stations from improving their facilities. It would also limit the flexibility of public television stations to modify their facilities to implement digital transmission, for example, by changing their transmitter sites.

Under the CBA proposal, Class A stations would be required to protect the Grade B contours of full-power television stations *as of the date* the Class A application is filed.⁷ Any increase in power, antenna height or other modification of the facilities by the full-power station after that date would have to protect the contour of a Class A television station.⁸ Since LPTV stations were authorized based on an engineering showing that they would not cause interference to any existing operating or authorized full-power station, the facilities employed by LPTV stations are, in many cases, a function of the ERP, HAAT and transmitter site of existing full-power stations. Indeed, under the current rules, some LPTV stations now operating would have to cease operation if a full power station were to improve or modify its facilities. Under the CBA proposal, however, these LPTV stations may be eligible for Class A status and, if they

⁷ Proposed Section 73.627(e).

⁸ See proposed Section 73.627(c)(iv) & proposed Section 73.627(g).

obtain a Class A authorization, their current service contours would be entitled to protection. Thus, attempts by full-power stations to modify their facilities could be restricted, if not precluded, by the proposal to protect the service contours of Class A stations.

This result could seriously hamper the ability of current public television stations to make public television service more widely available by increasing power or antenna height, particularly those stations operating with limited facilities. Indeed, while APTS does not have the resources to conduct an engineering study of the issue, it is concerned that the smaller service areas of public television stations operating with limited facilities, may have made the channels on which they operate likely candidates for LPTV and translator applications. Thus, existing public television stations may be more likely than their commercial counterparts to be constrained by the CBA proposal and to be relegated to their existing smaller service areas.

Further, although the CBA proposal would allow full-power stations to maximize their DTV facilities under Section 73.622(f), the proposal could nonetheless adversely affect the ability of television stations to improve their coverage by modifying their DTV facilities in other ways. For example, it is not clear whether Section 73.622(f) covers changes in transmitter sites and thus whether full-power stations that relocate to new transmitter sites more than 5 kilometers from the current sites will be required to protect Class A stations. Similarly, it is not clear whether Section 73.622(f) applies to change changes or exchange of channels by stations. It is also not clear from the CBA proposal or from Section 73.622(f) whether full-power stations assigned DTV channels outside the core will be required to protect Class A stations when they shift to an in-core digital

assignment. Such a protection requirement, if applicable, would restrict public television stations' choices of permanent digital channels and could force stations to accept less desirable channels, with smaller coverage areas, lower power and poorer quality service. This would unfairly disadvantage public stations with out-of-core assignments.

The CBA proposal will also make it more difficult for the Commission to replace the reserved non-commercial channels that were deleted from the table in order to accommodate digital assignments during the transition. In its decision on reconsideration of the *Sixth Report and Order*, the Commission acknowledged the potential loss of public television service occasioned by the deletion of vacant reserved channels and proposed reserving additional channels to replace the deleted channels after the DTV transition was complete.⁹ Giving LPTV stations primary, protected status will make the re-allocation of those reserved channels more difficult. In some areas of the country, it may make it impossible.

B. The CBA's Proposal Will Adversely Affect Public Television Translators

In addition to limiting the ability of full-power public television stations to improve their facilities, the CBA proposal would seriously threaten the ability of public television translator stations to find new channels when they are displaced from their current channels by DTV stations or by new services on Channels 60 to 69. Specifically, the CBA proposes to afford Class A stations priority over television translators and to limit eligibility for Class A status to low power stations offering certain minimum

⁹ See *Memorandum Opinion and Order on Reconsideration of the Sixth Report and Order*, MM Dkt No. 87-268, __ FCC Rcd. ____, ¶ 133 (1967) ("*Sixth Report and Order Reconsideration*").

amounts of locally originated programming. Granting Class A stations priority over public television translators could reduce the ability of many public television stations to reach smaller communities and rural populations currently served by these facilities.

Currently, public television stations operate approximately 800 television translator stations serving communities in 44 states. Those translators are affiliated with 120 different public television stations. Most of the translators are in the sparsely populated areas of the western states, such as Arizona, Colorado, Nebraska, New Mexico, and Utah but there are a substantial number of public television translators operating in New Jersey, New York, Ohio, Pennsylvania and Virginia.¹⁰

CBA's proposal would seriously jeopardize the ability of many of these translators to continue operating during and after the transition to digital. As APTS and others made clear during the Commission's DTV proceeding, the need to accommodate new DTV stations and the reallocation of Channels 60 to 69 will strain the frequencies available for translators and LPTV stations displaced by DTV stations and new users of channels 60 to 69.¹¹ CBA's proposal will clearly aggravate that situation. First, it would confer protected status on existing LPTV stations that become Class A stations and give those stations priority over other applicants displaced by DTV facilities. Thus, it would allow Class A stations displaced by DTV stations or users of channels 60 to 69 to displace public television translators. Second, it would permit LPTV stations to increase

¹⁰ A list of the public television translators and the stations whose signal they rebroadcast is attached to these comments.

¹¹ See *Sixth Report and Order* at ¶¶ 53-56; *Sixth Report and Order Reconsideration* at ¶¶ 108-111 (1998); Pet. for Recons. and Clarification of Association of America's Public Television Stations and Public Broadcasting Service in MM Dkt No. 87-268, at pp. 23-26 (June 13, 1997); Comments of the Association of America's Public Television Stations and the Public Broadcasting Service in MM Dkt No. 87-268, at pp. 15-17 (1967).

power significantly, therefore foreclosing opportunities for public television translators to find replacement channels. Third, it would give Class A stations displaced by DTV stations that improve their facilities priority for channel assignments over both new translators and displaced translators.¹²

Public television currently faces a significant challenge to relocate translators displaced by digital assignments and some translator service is already at risk. The elevation of low power stations to a protected class imposes significant additional pressure on this process and is likely to result in additional loss of public television translator service. The loss of any of these translators will deprive citizens of free, over-the-air public television service. In some cases, translators are part of a translator system where one translator feeds another, such as exists in several western States. The loss of a key translator station in these circumstances could deprive not only the translators' community of service but also a large number of other communities of their only source of public television programs.

C. CBA's Proposal Is Inconsistent With Congress' Goal of Making Public Television Service Available Nationwide

As APTS has demonstrated in numerous filings in the Commission's DTV rule making and other proceedings, Congress has made it clear throughout the history of public broadcasting that the unique services offered by noncommercial stations should be made available on a universal service basis. From the enactment of the Educational

¹² See proposed rule 73.627(g).

Television Facilities Act in 1962¹³ through the passage of the Public Broadcasting Act of 1967¹⁴ and the subsequent amendments to that Act, Congress has consistently stated that public broadcast service should be made available to all U.S. citizens. Thus, in enacting the Public Broadcasting Act, Congress found:

that it is necessary and appropriate for the Federal Government to complement, assist, and support a national policy that will most effectively make noncommercial educational radio and television service available to *all the citizens of the United States*.¹⁵

And, in 1992, Congress again ruled:

[I]t is in the public interest for the Federal Government to ensure that *all citizens of the United States* have access to public telecommunications services . . .¹⁶

As demonstrated above, the CBA proposal undermines this consistent 36-year policy. It jeopardizes the ability of full-power public television stations to modify their facilities to serve larger audiences and it impairs the ability of public television stations to find replacement channels for their translators displaced by DTV stations and users of reallocated channels 60 to 69. Accordingly, APTS urges the Commission not to pursue CBA's proposal at this time.¹⁷

¹³ Educational Television Facilities Act, Pub. L. No. 87-447, 76 Stat. 64 (1962), *reprinted in* 1962 U.S.C.C.A.N. 79, 81 (funding should be made available to "serve the greatest number of persons and serve them in as many areas as possible . . .").

¹⁴ Pub. L. No. 90-129, § 201, 81 Stat. 369 (1967).

¹⁵ *Id.*, (codified at 47 U.S.C. § 396(a)(5) (1967)) (emphasis added).

¹⁶ Pub. L. No. 102-356, 106 Stat. 949 (1992) (emphasis added).

¹⁷ If the Commission decides to proceed with the CBA proposal, APTS urges the Commission to allow public television translator stations which provide public television service to unserved areas to obtain Class A.

D. The Commission Should Delay Any Consideration of CBA's Proposal Until After the Transition to Digital

Although APTS opposes CBA's proposal at this time, it recognizes that LPTV stations provide valuable service and that some change in their secondary status may be warranted. Indeed, it is aware that the Commission indicated in its *Sixth Report and Order*¹⁸ that it would issue a notice of proposed rule making to change the status of LPTV stations. However, the difficulties posed by CBA's proposal for the transition to digital cautions against issuance of that notice now. Rather, the more prudent and reasoned course is for the Commission to postpone consideration of LPTV's secondary status until after the transition to digital. Further, postponing action would allow the Commission to evaluate better the proposal's impact on the digital transition and would allow full power stations to evaluate meaningfully the effect of creating this new Class A service on their ability to serve their audiences.

Low power television stations acquired their facilities with the knowledge that they were secondary facilities and that they could be displaced by new stations or by changes in the facilities of existing stations. The Commission reaffirmed LPTV's secondary status in the digital television proceeding and this decision was upheld in Court. The current proposal is yet another effort to alter the regulatory regime under which low power stations operate prior to an orderly and complete transition to digital by full power stations. Although many low power stations provide valuable services to their communities, the service was created as, and remains, a supplement to the television

¹⁸ See 12 FCC Rcd. 14588, ¶¶ 142-43 (1997).

service provided by full power stations. The Commission should not make any changes that may undermine the service offered by full-power television stations.

Conclusion

For the reasons set forth above, APTS urges the Commission to deny the CBA Petition at this time. Once the transition to digital is well underway and the impact of the CBA proposal on full-power public television and public television translator stations can be meaningfully evaluated, the Commission might revisit the proposal and make an more informed and educated decision as to whether it serves the public interest.

Respectfully submitted,
